Mamadou Camara (40315009)

Sprint #1

I implemented the User Registration/Login feature end-to-end, building the FastAPI backend (JWT-based authentication, bcrypt password hashing, SQLAlchemy models/schemas for users) connected to our shared Supabase PostgreSQL database, as well as the React/TypeScript frontend for the login, registration, and dashboard pages. I also iterated on the UI/UX of the login and registration pages (styling, password visibility toggle, email validation). In addition, I was responsible for maintaining the team's meeting minutes, documenting attendance, decisions, and action items across our Sprint 1 meetings to keep the team's process record up to date.
